SPENERGY: Bringing you the next generation of Sanitization!
For more information, visit: www.uvcertified.com

Spenergy's Sanitation as a Service - (SaaS) offers a low-risk low-cost solution to managing your sanitization needs.

How? By mitigating nearly all end-user objections around the capital outlay, maintenance, accounting, timeframe, and even commitment.

WHAT IS SANITATION AS A SERVICE?

SAAS is a monthly subscription agreement that includes the cost of the Automated and Monitored 24/7 operating UVC sanitization system, installation and ongoing maintenance of the system for the term of the agreement

FEATURES INCLUDE:

- ✓ Permanent Preventative System to control Covid-19 on all future pathogens.
- ✓ Low Cost Solution
- ✓ Completely customized and engineered UVC disinfection Technology
- ✓ Improves safety and elevates confidence in your work place.
- ✓ Automated and Monitored with audit trail capabilities
- ✓ Up to 50% savings in annual disinfection expenditures
- ✓ Full maintenance coverage and annual system inspections
- ✓ UVC bulb replacement
- ✓ Renewable 3 year subscription program

SAAS offers a low-cost solution for large property portfolios, reducing annual disinfecting expenditures by 50% and gets treated as an operating expense.

Having this technology will drive new business to the door as it creates a safer environment that customers feel comfortable shopping at or employees working at and most importantly it's more effective than manually sanitizing!

Companies want the safety, morale, and productivity that our autonomous 24/7 system can bring. We know that most businesses are not able to disinfect to meet most of the newly imposed minimum government standards. This virus possesses serious health risks and places employees and customers at a higher danger than they need to be in.

Our UVCertified SAAS solution enables our customers to provide the latest technology to sanitize 24/7 autonomously and meeting government requirements needed to remain compliant and stay open and also generate some positive cash flow from the savings of manually disinfecting. Not to mention, incorporating "Offense" style measures to help mitigate and reduce the spread of Covid-19 and future viruses.

On UVCertified SAAS subscription anniversary dates, we will provide our clients with the following options:

- ✓ **Renew their new subscription agreement with the latest SMART UVC technology.** This can potentially provide even more positive cash flow while also giving the customer new inventory, i.e. software updates.
- ✓ **Extend the subscription.** We can maintain the existing UVC Sanitization system or we can do an agreed-upon amount of upgrading.
- ✓ **Take ownership of the UVC disinfectant system.** Customers can opt to end the subscription and take full responsibility for their SMART UVC Sanitization system and can opt for our service agreement.

There are several other things to think about when it comes to successfully implementing SAAS into your offerings:

WHAT IF YOUR FACILITY LEASE IS UP AND YOU'RE MOVING?

The contract is a multi-year commitment, so as long as the new tenant is credit-worthy, the best course of action is to transfer the subscription to the new tenant. Once the new tenant has completed the term of the agreement, they can choose to renew, extend, or cancel it at that point.

WHAT IF THE CUSTOMER WANTS US TO MAINTAIN PRODUCTS WE DIDN'T SELL?

Part of our agreement is that our SMART UVC System must be used for every application where we have a suitable product. If there's an area where we don't make a product, that is fine, but we will only maintain the SKUs that we have sold.

SAFE AND EFFECTIVE

UVAIR 300-F

- Fixed Installations
- Large rooms
- 3 Stage filtration
- Up to 1,200 m3 ACH
- Multiple installation options
- Easy change filters
- App based control

- Easy change filters
- App based control

UVAIR 108

- Mobile
- Medium rooms
- 3 Stage filtration
- Up to 400 m3 ACH
- Easy change filters
- App based control

Testimonial by
Dr. David French, *Periodontist*

COVID-19 is an unavoidable risk but there are measures that can be done which go beyond the use of masks and hand sanitizer. In particular the management of aerosols, which is now recognized as an important vector of disease transmission in indoor spaces.

The safety of my staff and patients is very important, so we have installed UV-C light sanitization which clears the air of contamination after any procedure that generates aerosols. This provides us the confidence that we and our patients are safe at work in these difficult times.

▶ Please have a look at my UV-C review at <https://youtu.be/UCjwbcYdUg>.

I invite you to contact Spenergy Certified Solutions who can provide you with a customized UV-C Sanitization Solution.

Yours,
Dr. David French
